A READY-NOW FAMILIARIZATION TRAINING SOLUTION

# BASIC VIRTUAL TRAINER

## A READY-NOW FAMILIARIZATION TRAINING SOLUTION

The Basic Virtual Trainer (BVT) is a portable, lightweight training solution that's ready now. Utilizing cost-effective technology and approach, students can begin training today, familiarizing themselves with what to expect when they enter formal training, creating an acceleration of readiness never seen before.

### READY NOW

BVT is a cost-effective training solution utilizing commercial off-the-shelf (COTS) products such as a virtual reality (VR) goggle headset, laptop and Lockheed Martin's Prepar3D® software to virtually familiarize users with their platform, making the solution readily available for militaries around the globe.

### ADAPTABLE

The open design on BVT allows for additional platforms to be adopted and modeled, to include vehicles, small arms, aircraft and personal equipment. Turnaround time for integration of new platforms takes as little as four weeks to recreate and configure for use.

### REALISTIC

Each platform is drawn and texturized to capture even the finest details and provide a hyper-realistic 3D model. This immersive training capability engages students more effectively to prepare them to support the readiness of themselves and their units.
